Education

Bachelor of Science (B.S) in Computer Science Expected Graduation, May 2028

Indiana Institute of Technology Fort Wayne, IN

GPA: 3.77

Professional Experience

Computer Vision Research Project – Research Assistant – Indiana Institute of Technology (March 2026 – Present)

- Lead ML/CV pipeline development for a robotic bin-picking system | Integrate YOLOv8 for real-time detection + SAM for segmentation masks to guide a robotic arm.
- Manage end-to-end data pipeline | Image capture → Label Studio annotation → YOLOv8 training → SAM refinement → iterative model improvement.
- Developed an active learning model to boost productivity, automatically selecting the most informative unlabeled samples for annotation, reducing labeling effort by ~40% while maintaining model accuracy.
- Leveraged Pandas, NumPy, and Matplotlib for data analytics and processing — cleaned annotation logs and visualized confidence-score distributions to prioritize hard examples.
- Troubleshoot segmentation precision on densely packed objects while scaling dataset diversity (poses, lighting, occlusions) to reduce false positives and improve real-world reliability.

IT Service Desk Technician – Indiana Institute of Technology (January 2026 – March 2026)

- Provided first-level technical support by answering calls and creating detailed tickets to document user issues.
- Reviewed and addressed technical support tickets to resolve user issues efficiently.
- Delivered on-site technical support in classrooms, ensuring projectors, computers, and related equipment were fully operational.

IT Support Technician – Internship – Shikellamy School District (June 2025 – August 2025)

- Prepared and configured student and staff computers, including imaging, software installation, and setup.
- Diagnosed and repaired hardware issues such as screens, keyboards, and internal components.
- Troubleshot software problems across Windows devices and virtual machine environments, reducing downtime.
- Documented repairs and procedures to improve team efficiency and create reference material for future use.

Projects

Home Lab (August 2025 – December 2025)

- Installed and configured Ubuntu Server on multiple laptops, creating a personal IT lab environment.
- Deployed Pi-hole for network-wide ad blocking and set up an NFS server for file sharing.

Network Design II Final Project (October 2025 – December 2025)

- Designed a multi-VLAN enterprise network in Packet Tracer with trunking, inter-VLAN routing, and secure segmentation.
- Configured DHCP, DHCP relay, routing protocols, wireless security, and remote management.
- Validated the full topology by testing addressing routing paths, switch configurations, and end-to-end device communication.
